

Lin Wang

Dr. L. WANG who working at Chuo Kaihatsu Corporation, is a senior manager of geotechnical engineering with expertise in rain-induced slope instability, earthquake-induced slope instability, development of slope monitoring and alarm system. He undertook his PhD at the University of Tokyo, Japan, after graduation he is engaged in the research and development of the monitoring of landslide and slope failures in the long term.

Recently he carries out the research, supported by cabinet office, government of Japan, and finished the SIP (Cross ministerial Strategic Innovation Promotion Program) research during 2014-2017, which theme is R&D of Early Warning Monitoring System of Slope Failure Based on Multi-point Tilt Change by using IoT and MEMS technology. The results of research are now deployed to Japan, Australia, Taiwan, China and India during last ten years.
